ESCUADRÓN 303 — LANZAS DEL ALBA

SVAF TRAINING FRAMEWORK

Document revision · 29 October 2026

VATSIM connection and communications module

Internal training on installing/updating vPilot, credentials, callsign, flight plan, connecting/disconnecting, audio, frequency selection, and ATC communications. Current official documentation must be checked.

IVAO connection and communications module

Internal training on installing/updating Altitude, Pilot Core/UI where applicable, IVAO flight plan, connecting from gate/parking, matching callsign, VID and website password, MTL, Tx/Rx, ONLINE status, ATC/frequency selection, and disconnecting.

Parallel practice

Separate procedures will be taught for both networks. Using vPilot on VATSIM does not replace learning Altitude on IVAO, or vice versa. TeamSpeak 3/Discord are for internal coordination, never a substitute for ATC communications.

Training scope

SVAF training is internal and does not replace VATSIM or IVAO exams, ratings, licences, access requirements, or authorizations

Software sources: VATSIM/vPilot and official IVAO/Altitude documentation. Check current versions and manuals before installation.
