ESCUADRÓN 303 — LANZAS DEL ALBA

FLIGHT OPERATIONS AND RECORDING

Document revision · 29 October 2026

Network selection and connection

Before each flight, explicitly identify whether it will take place on VATSIM or IVAO. VATSIM uses vPilot; IVAO uses Altitude. Apply the selected network’s procedure, credentials, flight plan, and rules. Do not record a flight as belonging to both networks.

System record

Record network (VATSIM/IVAO), client (vPilot/Altitude), date/time, pilot, relevant VID/CID, callsign, aircraft, origin/destination, profile, and outcome. Distinguish network flights from internal/MSFS activity

Communications

ATC communication takes place through the selected network’s voice system and assigned frequency. TeamSpeak/Discord are for internal communication and must not be confused with ATC

Software sources: VATSIM/vPilot and official IVAO/Altitude documentation. Check current versions and manuals before installation.
